

para-gauze

Paraffin coated
gauze swab dressing

Para-Gauze Paraffin Gauze Swab Dressing is a sterile, highly effective dressing that facilitates wound healing by providing a non-adherent, protective layer. This dressing is ideal for use on various wounds, including burns, skin tears, and chronic ulcers. The unique paraffin-coated gauze ensures gentle, non-traumatic contact with the wound bed, minimising discomfort and reducing pain during dressing changes.

Para-Gauze is made from soft, high-quality gauze netting coated with a paraffin-based ointment, which helps maintain a moist wound environment. This moisture retention is crucial for promoting faster healing and preventing the dressing from sticking to the wound bed, thus reducing the risk of trauma when changing dressings.

The open dressing weave allows exudate to drain off the wound base. It effectively draws away exudate, helping keep the wound free from contaminants. The paraffin coating also acts as a barrier, protecting the wound from external irritants.

para-gauze

Paraffin coated gauze swab dressing

Suitable For:

- Suitable for most wound types
- Ideal for use with burns, skin grafts, chronic ulcers, and skin tears.

Contraindications

- Seek medical advice immediately for all serious wounds and burns
- Not suitable for dry or low leaking wounds

Application:

The Para-gauze dressing can be applied directly to the wound bed, making it ideal for painful or sensitive wounds. The paraffin coating assists in adding moisture to the wound bed, helping to maintain a clean and moist wound environment while promoting optimal healing.
